(1) JOIN THE INITIATIVE IN JUST TWO STEPS

STEP 1: SIGN UP IN WIKIPEDIA

- Open Wikipedia and create an account to be part of a community with more than 28 million of Wikipedians.
- Use “**Create account**” tab on the top left hand side of any Wikipedia page.

STEP 2: BE BOLD AND START EDITING

- The above Wikipedia expression is widely used to encourage editing:
https://en.wikipedia.org/wiki/Wikipedia:Be_bold
- There are two main ways to contribute to the SiRA Wikipedia initiative by:
 - adding references in the **Wikipedia List:**
https://en.wikipedia.org/wiki/List_of_Guidances_for_Statistics_in_Regulatory_Affairs
 - creating articles related to regulatory guidances on the **Wikipedia Article:**
https://en.wikipedia.org/wiki/Guidances_for_statistics_in_regulatory_affairs

Guidances for statistics in regulatory affairs

From Wikipedia, the free encyclopedia

Guidances for statistics in regulatory affairs are applicable to the **pharmaceutical industry** and medical devices industry. These Guidances represent the current thinking of regulatory agencies on a particular subject. It is to be noted that the term "Guidances" is used in the USA, whereas the term "Guidelines" is used in Europe.

Regulatory affairs, also called government affairs, is a profession within regulated industries, such as pharmaceutical and medical devices, where professionals such as statisticians have the responsibility to comply with the regulatory guidance. Statisticians working in a regulated environment (e.g. the pharmaceutical and healthcare industry) are obliged to have a sound knowledge and understanding of the regulatory requirements that affect the design, conduct, analysis and reporting of their studies.^[1]

Regulatory guidance for the pharmaceutical and medical devices industry can be found at the international level (e.g. ICH - International Council on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use), as well as at the regional/national level; for example:

- EMA - European Medicines Agency in Europe,
- MHRA - Medicines and Healthcare products Regulatory Agency in UK,
- IQWiG - Institute for Quality and Efficiency in Health Care in Germany,
- FDA - Food and Drug Administration in USA and
- PMDA - Pharmaceuticals and Medical Devices Agency in Japan.

Furthermore, statistical regulatory guidance is found under general topics (e.g. [Good Clinical Practice](#) - ICH E6(R2)^[2]) and specific ones explicitly related to statistics (e.g. [Statistical Principles for Clinical Trials](#) - ICH E9^[3]) or not explicitly (e.g. [Special Populations: Geriatrics](#) [ICH E7]^[4] or [Clinical Trial Endpoints in Oncology](#) [FDA]^[5]). This large volume and diversity of documents and information sources is subject to regular revisions.

The Wikipedia List of [Guidances for Statistics in Regulatory Affairs](#) provides links to various guidances under different topics.

History [\[edit source \]](#)

The pharmaceutical and medical devices industry has been highly regulated following the tragedies from [Thalidomide](#) that was marketed in 1957, Germany, without adequate testing.^[6] In the US, [Elbix sulfanilamide](#) already caused some regulatory initiative in the 1930s. The Thalidomide catastrophe tightened the regulatory pressure in the US in the 1960s as well. A large volume and variety of regulatory "guidances" were initially developed by the [Food and Drug Administration](#) (FDA) in the USA and "guidelines" by the [European Medicines Agency](#) (EMA) in Europe. Also, other regions of the world issued regulatory guidance, for example, [Pharmaceuticals and Medical Devices Agency](#) (PMDA) in Japan. In 1989 a plan for harmonization of guidance across Europe, Japan and the USA was started and the first meeting of [International Council on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use](#) (ICH) was held in 1990, Brussels.

Regarding applications in [Health technology assessment](#) (HTA) a number of national guidance papers are available from the local HTA organizations: the [Institute for Quality and Efficiency in Health Care](#) (IQWiG) in Germany, the [National Institute for Health and Care Excellence](#) (NICE) in UK , the [Agency for Healthcare Research and Quality](#) (AHRQ) in USA or the [Canadian Agency for Drugs and Technologies in Health](#) (CADTH) in Canada. In Europe, the [European Network for Health Technology Assessment](#) (EUnetHTA) was established in 2005 to create an effective and sustainable network for HTA to support collaboration between European HTA organizations. EUnetHTA Guidelines have been developed to help the assessors of evidence to process, analyse and interpret the data.

General Guidance [\[edit source \]](#)

General guidance covers statistical topics that relate to good clinical practice; study design, monitoring and reporting, and market authorization of medical products or medical devices.

Good Clinical Practice [\[edit source \]](#)

The [good clinical practice](#) (GCP)^[7] is an international ethical and scientific quality standard for designing, conducting, recording and reporting trials that involve the participation of human subjects. It was issued by ICH under [Good Clinical Practice Directive](#) (Directive 2005/28/EC) of 8 April 2005. A similar guideline for clinical trials of [medical devices](#) is the international standard [ISO 14155](#), that is valid in the European Union as a harmonized standard. Compliance with the GCP standard provides public assurance that the rights, safety and well-being of trial subjects are protected, consistent with the principles that have their origin in the Declaration of Helsinki, and that the clinical trial data are credible.

List of Guidances for Statistics in Regulatory Affairs

From Wikipedia, the free encyclopedia

This List presents a comprehensive source of references for statistical guidance documents and related articles that are relevant to regulatory affairs for those statisticians that work on clinical studies. The List is associated with the Wikipedia page [Guidances for statistics in regulatory affairs](#) that aims to address the various topics of the listed guidances.

References classified by statistical topic [\[edit source \]](#)

Good clinical practice [\[edit source \]](#)

- ICH E6(R2) Good clinical practice ^[1] is an international ethical and scientific quality standard for designing, conducting, recording and reporting trials that involve the participation of human subjects.
- FDA Good Review Practice: Clinical Review of Investigational New Drug Applications.^[2] This good review practice (GRP) document was prepared to assist FDA clinical review staff in reviewing clinical submissions to an investigational new drug application (IND) from the pre-IND phase to the time of the pre-new drug application/biologics license application meeting.

Data monitoring committees [\[edit source \]](#)

- CHMP/EWP/5872/03 Data monitoring committees^[3] (EMA) deals with independent data monitoring committees. It highlights the key issues involved when sponsors include data monitoring committees as a part of their trial management.
- FDA Establishment and Operation of Clinical Trial Data Monitoring Committees.^[4] This guidance discusses the roles, responsibilities and operating procedures of Data Monitoring Committees (DMCs) (also known as Data and Safety Monitoring Boards (DSMBs) or Data and Safety Monitoring Committees (DSMCs)) that may carry out important aspects of clinical trial monitoring.

Adjustment by covariates [\[edit source \]](#)

- EMA/CHMP/295050/2013 Adjustment for baseline covariates in clinical trials^[5] (EMA) provides advice on how to address important baseline covariates in designing, analysing and reporting clinical trials. It mainly focuses on confirmatory randomised trials.

Small populations [\[edit source \]](#)

- CHMP/EWP/83561/05 Clinical trials in small populations^[6] (EMA) addresses problems associated with clinical trials when there are limited numbers of patients available to study.

Non-Inferiority [\[edit source \]](#)

- CPMP/EWP/2158/99 Choice of a non-inferiority^[7] (EMA) provides guidance on two types of non-inferiority trials: trials with two arms, the test product and a comparator; and three-armed trials with the test product, an active comparator and placebo.
- CPMP/EWP/482/99 Switching between superiority and non-inferiority^[8] (EMA) addresses the issues of superiority, non-inferiority and equivalence from the perspective of an efficacy trial with a single primary variable.

Subgroup analysis [\[edit source \]](#)

- EMA/CHMP/539146/2013 Investigation of subgroups in confirmatory clinical trials^[9] (EMA) provides guidance for assessors in European regulatory agencies on assessment of subgroup analyses in confirmatory clinical trials.

Endpoints [\[edit source \]](#)

- FDA Clinical trial endpoints for the approval of cancer drugs and biologics^[10] provides recommendations to applicants on endpoints for cancer clinical trials submitted to the Food and Drug Administration (FDA) to support effectiveness claims in new drug applications (NDAs), biologics license applications (BLAs), or

(4) WIKIPEDIA “TALK” PAGE

“TALK” PAGE IS RELATED TO “ARTICLE”

- “Talk” page provides space for editors of an article discuss changes associated with it.
- Talk Page(s) related to the SiRA initiative shows information about the format that the Articles must follow, a “To-Do List” for anyone interested to collaborate, and a space for open discussion.

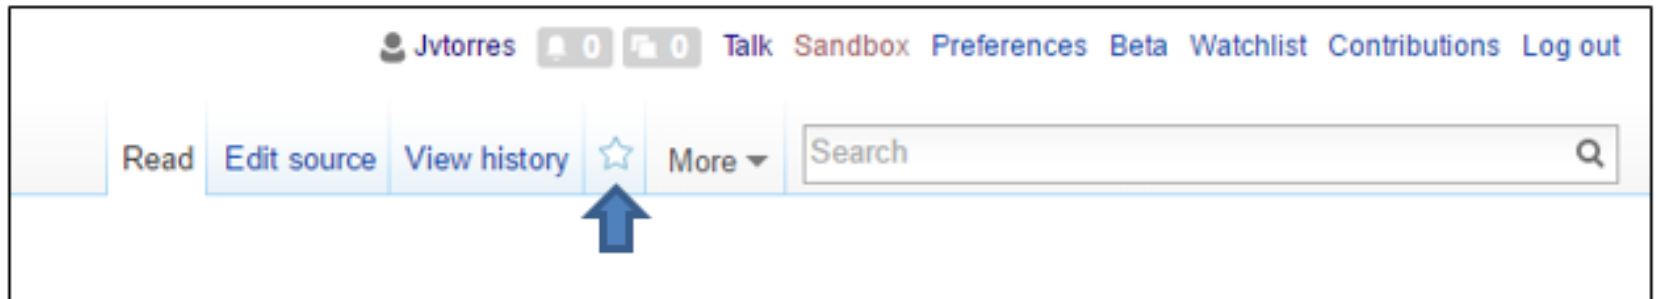

The screenshot shows the Wikipedia interface for the article "List of Guidances for Statistics in Regulatory Affairs". At the top, there is a navigation bar with the user name "Stanislav Katina" and various utility links like "Talk", "Sandbox", "Preferences", "Beta", "Watchlist", "Contributions", and "Log out". Below the navigation bar, there are tabs for "Article" and "Talk", with "Talk" being the active tab. A search bar is visible on the right. A prominent banner at the top of the article content area reads: "Voting has begun in the Wikimedia Foundation Board of Trustees elections! Voting ends at 23:59, 14 May 2017 (UTC). Verify your eligibility and vote now." with a "Vote now" button. The article title is "List of Guidances for Statistics in Regulatory Affairs". Below the title, it says "From Wikipedia, the free encyclopedia". The main text of the article begins with: "This List presents a comprehensive source of references for statistical guidance documents and related articles that are relevant to regulatory affairs for those statisticians that work on clinical studies. The List is associated with the Wikipedia page [Guidances for statistics in regulatory affairs](#) that aims to address the various topics of the listed guidances." Below the text, there is a section titled "References classified by statistical topic" with an "[edit source]" link. Under this section, the first reference is "Good clinical practice" with an "[edit source]" link. A bullet point follows: "• ICH E6(R2) Good clinical practice^[1] is an international ethical and scientific quality standard for designing, conducting, recording and reporting trials that involve the participation of human subjects". On the right side of the article, there is a "Contents" box with a "[hide]" link. The contents list includes: "1 References classified by statistical topic", "1.1 Good clinical practice", "1.2 Data monitoring committees", and "1.3 Adjustment by covariates". On the left side of the page, there is a sidebar with the Wikipedia logo and a list of navigation links: "Main page", "Contents", "Featured content", "Current events", "Random article", "Donate to Wikipedia", "Wikipedia store", "Interaction", "Help", "About Wikipedia", "Community portal", "Recent changes", and "Contact page".

(5) WIKIPEDIA “WATCHLIST”

FOLLOW ARTICLES

- Follow Articles of your interest by including them in your “[Watchlist](#)”.
- You will be notified anytime there is a change on the Articles you follow.
- This might be very useful to keep you updated about any new document included in the *List of Guidances for Statistics in Regulatory Affairs*.

Click on the star to
active the [Watchlist](#).

(8) EXAMPLE 1: INSERTING A HEADER IN THE “LIST” (I/II)

GO TO THE “LIST” PAGE AND CLICK ON THE “EDIT SOURCE” TAB ON THE TOP LEFT HAND SIDE

An “Edit Source” screen opens up. The top and the bottom of the editor has important tabs.

The screenshot shows the Wikipedia 'Edit source' interface for the article 'List of Guidances for Statistics in Regulatory Affairs'. The page is in a light blue theme. At the top, there is a navigation bar with the user name 'Stanislav Katina' and various utility links like 'Talk', 'Sandbox', 'Preferences', 'Beta', 'Watchlist', 'Contributions', and 'Log out'. Below this is a search bar and a set of tabs: 'Article', 'Talk', 'Read', 'Edit source', 'View history', and 'More'. The main heading of the article is 'Editing List of Guidances for Statistics in Regulatory Affairs'. A warning message states: 'Content that violates any copyrights will be deleted. Encyclopedic content must be verifiable. Work submitted to Wikipedia can be edited, used, and redistributed—by anyone—subject to certain terms and conditions.' The editing area contains a rich text editor with a toolbar at the top (including Bold, Italic, Bulleted list, Numbered list, Link, and Cite) and a text area below. The text in the editor reads: 'This List presents a comprehensive source of references for statistical guidance documents and related articles that are relevant to regulatory affairs for those statisticians that work on clinical studies. The List is associated with the Wikipedia page [[Guidances for statistics in regulatory affairs]] that aims to address the various topics of the listed guidances. {{TOC right}} monitoring committees as a part of their trial management. * FDA Establishment and Operation of Clinical Trial Data Monitoring Committees.<ref> [https://www.fda.gov/downloads/regulatoryinformation/guidances/ucm127073.pdf FDA - Establishment and Operation of Clinical'. Below the editor is a 'Cite your sources:' field with a dropdown menu and a 'Cite your sources: <ref></ref>' button. At the bottom, there is an 'Edit summary' field with a placeholder '(Briefly describe your changes)', two checkboxes for 'This is a minor edit' and 'Watch this page', a paragraph of terms and conditions, and four buttons: 'Save changes', 'Show preview', 'Show changes', and 'Cancel'.

(8) EXAMPLE 1: INSERTING A HEADER IN THE “LIST” (II/II)

GO TO THE “LIST” PAGE AND CLICK ON THE “EDIT” TAB ON THE TOP LEFT HAND SIDE

- 1) To add a new level-3 header, e.g. “Cardiovascular” go to the appropriate position on the page and insert :
=== Cardiovascular ===
- 2) Click on “Show preview” tab for a preview that will appear on the top part of the screen.
- 3) Top of the screen says:
This is only a preview; your changes have not yet been saved! → Go to editing area.
- 4) Click on “Go to editing area” to return to the “Edit Source” mode.
- 5) Add some text in the field “Edit summary (Briefly describe your changes)”.
- 6) Click on “Save changes” at the bottom of the screen.

(9) EXAMPLE 2: ADDING A REFERENCE TO THE “LIST” (I/II)

GO TO THE “LIST” PAGE AND CLICK ON THE “EDIT” TAB ON THE TOP LEFT HAND SIDE

- Let us insert the ICH-E9 Guideline in the by firstly going to the appropriate position on the “Edit Source” screen and typing the following:
 - *[ICH E9 Statistical principles for clinical trials](http://www.ema.europa.eu/ema/index.jsp?curl=pages/regulation/general/general_content_001228.jsp&mid= ICH E9 - Statistical Principles for Clinical Trials)`<ref>`[\[http://www.ema.europa.eu/ema/index.jsp?curl=pages/regulation/general/general_content_001228.jsp&mid= ICH E9 - Statistical Principles for Clinical Trials\]](http://www.ema.europa.eu/ema/index.jsp?curl=pages/regulation/general/general_content_001228.jsp&mid= ICH E9 - Statistical Principles for Clinical Trials)`</ref>` (EMA) section III provides a general overview of common designs in clinical trials.
- The resulting text in the list is as follows:
 - [ICH E9 Statistical principles for clinical trials](#)^[22] (EMA) section III provides a general overview of common designs in clinical trials.
- The automatically numbered reference will appear at the bottom in the “Reference” section of the page as follows:
 - 22. [ICH E9 - Statistical Principles for Clinical Trials](#)

(9) EXAMPLE 2: ADDING A REFERENCE IN THE “LIST” (II/II)

NOTES ABOUT THE INSERTED REFERENCE

- i. The Edit Source text is `*ICH E9 Statistical principles for clinical trials<ref>http://www.ema.europa.eu/ema/index.jsp?curl=pages/regulation/general/general_content_001228.jsp&mid= ICH E9 - Statistical Principles for Clinical Trials</ref>` (EMA) section III provides a general overview of common designs in clinical trials.
- ii. The URL of the guidance appears in the between: `<ref>[]</ref>`.
- iii. Inserting `*ICH E9 Statistical principles for clinical trials` before `<ref>[` gives a bullet point to the name of the guidance.
- iv. Inserting `(EMA) section III provides a general overview of common designs in clinical trials.` after `]</ref>` is the ending of the sentence.
- v. The text `ICH E9 - Statistical Principles for Clinical Trials` appears in the automatically numbered “Reference” section on the bottom of the page.

END

THANK YOU!
